THE INSPECTOR

6 items left to find.

Insulation Frustration

The inspector was called to approve framing and was surprised to see how poorly the insulation was installed. Spot 6 problems with this picture. You earn 200 points for each correct answer. Click the Hint button for clues, but each hint will cost you 10 points.

Insulation Simulation

In this simulation you will experiment with adding different types of insulation to the walls and attic of a house and see how this affects the energy use of the home using a simulation called Energy3D.

1. First you will need to download and open up Energy3D. Go to [this page](#) to do so.
2. Now you need to download this file and open it up.

 [cape.ng3](#)
[Download File](#)

3. You are going to modify the insulation in the house and check each modification against the energy use of the house. Watch the video below.

Learn by doing, that's all that needs to be said

I loved the experiential component to learning. I find that I learn best, when I can experiment with things myself and get the answer wrong many different ways before arriving with the best answer.

It is entertaining, insightful and just plain wonderful.

I really enjoyed using the program. Having a visual representation is always a plus. Its cool being able to calculate the energy usage and to play around with the different values of insulation.

I think this a great tool to get a quick idea on how a house will perform. It's strength is that it's user-friendly, fast, and can run many different scenarios.
